Obiettivi

Objectives

This call aims to improve the understanding of mechanisms and drivers behind carbon dioxide (CO₂) sources and sinks in land and ocean environments. Eligible entities consist principally of research organisations and consortia with expertise in climate science, carbon flux measurement, and ecosystem analysis. The call focuses on strengthening

the scientific basis for climate modeling and mitigation by addressing gaps in current knowledge relating to both anthropogenic and natural factors influencing carbon cycling. Projects are expected to contribute to reconciling discrepancies between different scientific and policy communities regarding CO2 emissions and removals, with outputs aimed at supporting national and international climate strategies.

Funding

Funding is provided under the Horizon Europe Programme as a Research and Innovation Action (RIA). The topic has an indicative total budget of €25 million, with the European Commission expecting to fund around five projects, corresponding to an indicative EU contribution of approximately €5 million per project. Standard Horizon Europe funding rules regarding automatic eligibility for some international partners apply.
