DESCRIZIONE

Objectives

This topic aims to improve understanding of how access to quality green and blue spaces influences social cohesion, community participation, well-being, belonging and inequality in urban and peri-urban areas. Projects should examine whether unequal or insufficient access to nature-positive environments reinforces poverty, marginalisation, insecurity and other existing disadvantages, particularly among socially vulnerable groups.

The action also seeks to provide policymakers and civil society organisations with evidence, strategies and innovative solutions for integrating the distributional effects and non-market value of access to nature into spatial planning, land-use decisions and urban development. Research should support fair transitions

towards climate-resilient communities while contributing to biodiversity protection and urban ecosystem restoration.

Funding

The topic supports interdisciplinary Research and Innovation Actions studying the relationship between access to nature, social and environmental justice, community cohesion and societal resilience. Projects may analyse the community-level effects of introducing or improving green and blue spaces, including how their design, accessibility, management and intended uses influence interaction, civic engagement and shared identity.

Research should consider more than physical distance. Projects may assess barriers linked to poor maintenance, degradation, privatisation, affordability, safety, cultural norms and the functional needs of different groups. Activities may include comparative case studies, participatory research, spatial and distributional analysis, community pilots, planning tools and methods for incorporating social and environmental values into urban decision-making.
